

EXERCISE: BUILD A TELEGRAM CHATBOT

In this exercise, you'll create your own AI-powered Telegram chatbot using n8n and OpenAI. This bot will respond to user messages in Telegram using GPT (ChatGPT) responses.

You'll build the automation using these steps:

1. Trigger: Telegram

Start the workflow whenever someone sends a message to your Telegram bot.

2. AI Agent: Chat With GPT

Use the built-in AI Agent node connected to OpenAI Chat Model to generate smart replies.

3. Respond via Telegram

Take the response from GPT and send it back to the user using the Telegram node.
